## BenguFarm MOBILE App

BenguFarm Mobile has recently been released as an Android app. This app enables game farmers to capture animal data on a smartphone or tablet with an Android operating system and to synchronise it with the BenguFarm-GAME data on the breeder's computer.

Data on the breeder's BenguFarmGAME can be sent from his computer to BenguFarm-MOBILE on a smart phone or tablet. This data can then be viewed on the smartphone or tablet when moving around between the animals in the veld.

Basic animal data of new animals (calves/lambs born and animals purchased) can be recorded in the veld on BenguFarm-MOBILE.

General notes and all data recorded at darting of animals can also be recorded on BenguFarm-MOBILE. This data includes horn measurements, photos, camp movements, inoculations & dosing, microchip implants, DNA samples, pregnancy tests (females), fertility tests (males), internal parasites, illnesses & injuries, treatments, veterinary notes and weights.

The recording of data on BenguFarm-MOBILE in the veld does not need Internet access.

BenguFarm™ GAME is a module of

# BenguFarm™

ADVANCED LIVESTOCK MANAGEMENT SOFTWARE  
**BEEF • GAME • SHEEP • GOATS • PIGS • GENETICS**

The program can be set up in both **English and Afrikaans** and is easy to use, with the help of a **user-friendly manual** and step-by-step help function on most windows.

**Support and training are readily available** through our network of agents and is done by phone, e-mail and using Teamviewer remote support software.

**Mr. Johan de Jager:**

The programme **caters for 45 game species**. Subspecies, families/bloodlines and colour variants (including “splits”) can also be recorded. BenguFarm GAME provides for **extensive data verification** to ensure that data is recorded correctly.

## Special Features:

BenguFarm GAME automatically indicates fertility of females from **various reproduction calculations**, such as: age at first calving, inter-calving periods, days since last calving and expected calving dates. **Horn growth per month** is also calculated. These up-to-date scientific results enable breeders to use various **age corrected horn measurements and horn growth indices** for easy comparison and accurate selection of animals. Using pedigrees records, high levels of inbreeding can easily be avoided, as **inbreeding coefficients are estimated** for all animals, including progeny of planned matings.

A very important aspect of game breeding (and buyer's peace of mind) is the **DNA certification of parents and bloodlines**. Parentage and bloodlines are determined by DNA analysis, using hair or other biological samples, at laboratories such as UniStel. DNA reference numbers and all certification information, such as bloodline analysis method (**nuclear or mitochondrial DNA**), issued by these laboratories are captured by BenguFarm GAME. Certified animals and parents are **identified and marked with a symbol** in all BenguFarm GAME windows and reports.

## For the main window of BenguFarm GAME there are two options:

In the **Animal View**, basically all the information of an animal can be viewed, from general information, pedigrees, horn measurements and photos to health, progeny, including progeny averages through **18 interchangeable sub-windows**.

The **Herd View** lists all the animals with their most important data. Data can be **highlighted according to criteria** specified by the user to easily identify animals with traits meeting said criteria. On this view, **data can be sorted, filtered and grouped**. For example: grouping data by sire or by camp.

The **views are customizable** with the user able to switch off data he or she does not wish to see.

In light thereof the Owner/Seller, prospective Buyers and Buyers expressly takes note of and agree to the following:

- 2.1. The prospective Buyers and Buyers shall strictly observe the instructions from the independent auctioneer where bids are accepted from the attendees and online bidding platform.
- 2.2. The prospective Buyers and Buyers and/or its representatives, as the case may be, shall take reasonable steps to ensure that he or she is connected to the internet. It is advised not to utilise the internet if connectivity is poor and/or less than 4 megabits per second (Mbps) upload and download speed.

- 2.4. The prospective Buyers and Buyers and Owner/Sellers takes note and acknowledges that the auctioneer shall be entitled to close the online bidding for a particular lot prior to knocking down the hammer in order to take a final bid from the 'live attendees'. In the event where such bid was made and accepted, the auctioneer may, at its own discretion, reopen the online bidding for that lot to accept additional bids.
- 2.5. Once a bid is made it cannot be withdrawn.
- 2.6. Neither the Auctioneer, the Sellers' or the Auctioneer's representatives will be liable for any failure in connectivity or software while using the online bidding platform.

## 3. **TIMED AUCTION (IF APPLICABLE)**

- 3.1. The provisions of the 'Timed Auction Rules' applies to all lots sold on the 'Timed Auction' and will prevail when in contradiction with the 'Rules of Auction' relating to a lot sold on the 'Timed Auction'.

  - 3.4.1. Subject to paragraph 3.4.2 below, lots on the timed auction will close as per the specified date and time per lot as advertised on the online bidding platform, subject to an Extension Period. The closing of lots may be staggered.
  - 3.4.2. In the event where bidding on a lot will close and a bid is received within two (2) minutes of the published closing time, the time to enter a bid shall be automatically extended for an additional period, which period is customarily two (2) minutes, but may vary from time to time (the "Extension Period").
  - 3.4.3. A lot will not close if a bid is received during an Extension Period and shall automatically be extended for a further Extension Period. A lot will only close if a final bid on the lot stands alone for a period equal to the Extension Period. The lot will only close if a final bid on the lot is received and stands alone for a period equal to the Extension Period.
  - 3.4.4. The "fall of the hammer" on a lot for the purposes of the timed auction is defined as the date and closing time published on the online bidding platform and/or the Seller's/Auctioneer's public websites, alternatively at the date and time a final bid on a lot stands alone for a period equal to the Extension Period, whichever occurs last.
  - 3.4.5. All lots on sale on the timed auction will have a minimum starting bid price which will be indicated on the online bidding platform. Any bid above the minimum starting bid price will not necessarily be successful as the lot may be subject to a reserve price. Should the reserve price not be met, the lot will not be sold and shall be marked to be 'Subject to Confirmation (STC)'. Should the aforementioned occur it is advised to make contact with the Auctioneer as soon as possible to obtain instructions from the Owner/Seller to explore the viability of entering a transaction. This does not create any right of refusal nor does it impose an obligation on the Owner/Seller or the Auctioneer to enter any transaction.
  - 3.4.6. The minimum bidding increment may vary per lot but is specified on the online bidding platform.
  - 3.4.7. Once a bid is made it cannot be withdrawn.
  - 3.4.8. Neither the Auctioneer, the Sellers' or the Auctioneer's representatives will be liable for any failure in connectivity or software while using the online bidding platform.

Game stud breeding has become very specialized and has reached the same scientific level as livestock breeding. Recording is an essential tool that enables breeders to make informed management and breeding decisions. The age-old principle of 'to measure is to know' sums up the value of production recording.

## SA Stud Book

SA Stud Book is a non-profit animal recording association and Registering Authority (in terms of the Animal Improvement Act) owned by Breeders' Societies. The Association has more than 100 years of experience in the recording and genetic improvement of livestock and other animals. Services offered by SA Stud Book include data capture, verification, editing, processing and generating of reports for animals from 63 registered animal breeders' societies. Records are accepted from many animal species, including beef and dairy cattle, game, horses, sheep, goats, pigs, dogs and even alpacas. Stud Book also renders Scientific and Technical services and cooperates with other research institutions. Locally a research agreement with the University of Pretoria is in place and international contacts include amongst others Geneseek in the USA and ICBF in Ireland. Technical and Scientific personnel are professionally registered with SAC-NASP (South African Council for Natural Scientific Professions) and SA Stud Book's products and services carry the Certificate of Quality of ICAR (International Committee for Animal Recording).

## Logix

SA Stud Book's Logix central database is always accessible on the internet – all data submissions and reports can be submitted and obtained electronically via [www.logix.org.za](http://www.logix.org.za) 24 hours a day. Data is submitted directly to the database or via e-mailing of the back-up files of compatible farm software packages. The Logix database ensures direct web access and electronic data exchange with farm software and other databases. Reports assist users in making the correct management and breeding decisions in their herds. Service providers (e.g. DNA laboratories, diagnostic services, animal nutritionists, veterinarians and technical advisors, etc.), are able to access relevant information (with the consent of the owner) via the web. Seamless exchange of data between parentage validating laboratories happens automatically. This opens up a whole new range of possibilities, as for example all staff of a breeding farm and assigned advisors has access to up-to-date data and calculated information. The biggest advantage of a central database, like Logix, is that, although a breeder has access to his/her own data, analysis on the species can be performed over herds and within the species. This makes benchmarking possible. Logix not only provides statistics but give access to extensive reports and facilities to support livestock and game breeders in improving their animals. Duplication of biological samples in bio banks are avoided as confirmation of parentage of an animal by a lab is, for example, possible if the DNA (allocated) numbers of (possible) parents are available on Logix. It is also possible to record tracing and tracking of movement – where and when animals were transported, where animals originated and also any transfers of ownership. Stud Bok also renders a service to store and keep biological samples for future genetic testing, if needed.

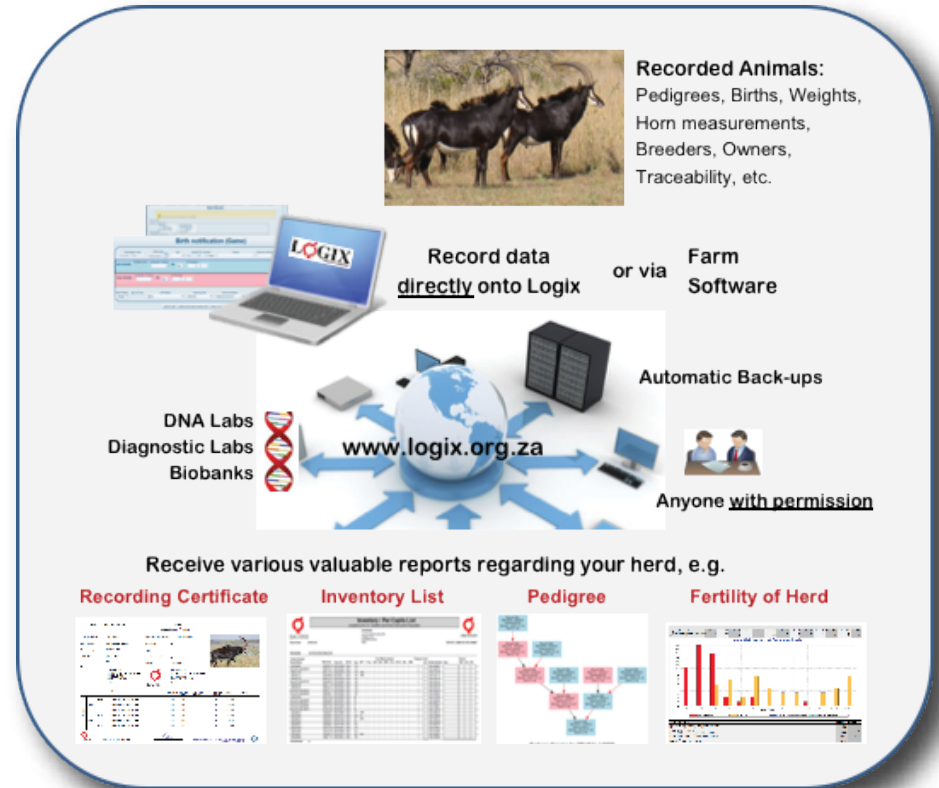

## Recording on Logix

At present, 42 different game species can be recorded in Logix Game. Sub-species, bloodlines and colour variants are also accommodated. As game breeding is still relatively new, breeders initially only need to record pedigree information and all births. However, all information recorded during darting events, including all horn measurements, can also be captured and stored on Logix Game. Horn traits include horn length, horn base, horn boss, horn rings, horn tip length, tip to tip and spread. Horn measurements are recorded as described by SA Hunter's Association, Rowland Ward and SCI and can be measured and displayed on Logix reports in inches as well as metric units. In addition to the full spectrum of horn traits, other important traits that improves information and therefore can be used to improve production can also be recorded. These traits and properties include reproduction traits in females (e.g. age at first birth and inter birth period), number of progeny, sexes of progeny and birth weights, scrotal circumference in males, body weights, teeth measurements and all information recorded at darting events. All recordings are also linked to the person responsible for such recordings or measurements (recorded as the "observer"). Certified observers, such as veterinarians, are also recorded on Logix, making it possible to validate all recordings. All recordings also carry a locality and date (even time, if needed) stamp. Inoculations and all other treatments can also be recorded. Production information is included on various reports, including pedigrees, certificates, progeny reports and herd reports. As soon as adequate data is available, genetic breeding values for horn measurements and any other trait conforming to the scientific norms associated with the application of mixed model methodology, will be supplied. The most important species that are currently recorded are Sables, Roans and Buffalo. [www.rowlandward.com](http://www.rowlandward.com)

Modern game breeders have unique needs to ensure sustainable success. SA Stud Book's services and products are trusted by all livestock industries; it keeps pace with the latest developments and is aimed at ensuring sustainability and profitability for Game Breeders.

## Why should a game breeder use the service of SA Stud Book?

- We are animal breeding specialists. All services and advice are backed up by Registered Animal Scientists.
- We have:
  - capacity,**
  - experience and**
  - a proven track record**
- We handle huge amounts of data from animals every day: from collection all the way through to the giving out of reports
- We have international accreditation in performance measurement and genetic evaluation
- We always work on scientific principles
- Recorded data are validated in terms of biological norms and legality (e.g. ownership)

## Recording on SA Stud Book's Logix Data Base

- Information of animals – Pedigrees, Traits, Measurements & Matings
  - Ownership / Transfer of ownership
  - Traceability – Temporary whereabouts of animals during transport & quarantine
  - Animal Events – Darting, Disease Testing, Monitoring & Dipping
  - DNA results - automatically updated from DNA labs (Unistel and Zoonomics)
  - Stored information and Reports are tailor-made to requirements of the industry
- The game breeder/manager records all data directly via the internet on Logix.  
Data from farm software (e.g. BenguFarm GAME) can also be uploaded.

## Day-to-day management decisions based on facts:

- All data of an animal is easily accessible and usable.
- Any data or recording mistakes are immediately flagged and can be rectified.
- Useful information on each individual animal: e.g. infertile females, animals with superior horn animals relative to the group

## Genetic information:

- Inbreeding should be avoided at all costs, and it is easy when pedigree information is at hand. Sires should for example not be mated to daughters or brothers to sisters.
- Breeding values will be estimated from pedigree and performance measurements when sufficient data is available.
- Genomic information is very useful to prove parentage, lines, identify carriers of certain colour genes, splits, as well as performance measurements. SA Stud Book provides a Genomic service through Weatherbey's in Ireland and Unistel in future. Collecting DNA samples AND recording as many production traits as possible is the way to go. Storing this data on a central database, like Logix, will lead to results much sooner, as all information from different herds can be pooled.
